Learn AI the way you actually think.

DAY 4 of 30

HACKATHONS

The funnel step everyone skips

WHAT YOU'LL LEARN TODAY

- › The step that goes missing
- › The impossible number it creates
- › Real close rates by business
- › How to sanity-check any funnel

The funnel step everyone skips

In One Line: A click becomes a lead. Only some leads become sales. Skip that step and your maths becomes fantasy.

The shortcut that breaks everything

Most demo funnels go:

clicks → **conversions** → **revenue**

The missing middle: a click gives you a *lead* — an enquiry, a form, a call.

Someone still has to close it.

The step that goes missing: most leads never become sales, and the gap is where the money is

What it did to my numbers

My app implied a coaching student acquired for about ■583 against a

■3,000 course fee. A 5x return, effortlessly.

Any agency owner watching would have stopped listening right there. Acquiring a paying student for ■583 is not a good campaign — it is a wrong calculation.

Real close rates are brutal

- Real estate — about **6 in 100** leads close. It is a years-long decision.
- Coaching — about **18 in 100**. Cheaper, faster, still a real decision.

- Ecommerce — about **85 in 100**, because the click *is* the purchase.

Adding that one step moved my cost-per-sale from **£583** to **£3,571** — a figure a real marketer would recognise.

If your funnel has no drop-off between click and sale, you are not modelling a business. You are modelling a wish.

Next video: why a campaign with 2.41x ROAS can still lose money.
