

Every AI similarity score is **one question**

DOT PRODUCT = HOW MUCH DO THEY AGREE?

same way

+1

right angles

0

opposite

-1

- 1 Two arrows pointing the **same way** give a big positive number.
- 2 **At right angles**, you get zero. No agreement at all.
- 3 Pointing **opposite ways** gives a negative. That is the whole idea.

REMEMBER THIS

Search, recommendations, embeddings — all of it is this one question.
