

ChatGPT is **not thinking**. Here is what happens.

ONE WORD AT A TIME

Pick the top word, add it, repeat

- 1 Given 'The capital of Maharashtra is', it scores **every word it knows**.
- 2 'Mumbai' scores **0.94**. It gets picked. Then the whole thing repeats.
- 3 Fluency is the **side effect** of doing that billions of times.

REMEMBER THIS

Knowing this tells you exactly when it will confidently invent something.
