

Most 'AI agents' are just **for-loops**

PIPELINE

always the same path

AGENT

chooses based on what came back

- 1 An agent is a model that **decides what to do next**. That is the definition.
- 2 Fixed order every single time? That is a pipeline with a bigger bill.
- 3 Agents earn their cost when the next step **depends on what came back**.

REMEMBER THIS

If you can draw the steps on paper first, you do not need an agent.
