

An LLM only predicts the next word

ONE WORD AT A TIME

Pick the top word, add it, repeat

One word at a time, each one fed back in

ChatGPT is not thinking. It is answering: *what word comes next?* — again and again.

- 1 Given 'The capital of France is', it scores every word it knows.
- 2 'Paris' scores highest, so it is picked. Then the whole thing repeats.
- 3 Fluency is the *side effect* of doing that billions of times.

REMEMBER

Knowing this tells you exactly when it will confidently invent something.
