

AI does not understand you

IT HAS READ, NOT UNDERSTOOD

ask: "what is the capital of Bihar?"

It has seen these sentences millions of times:

"The capital of Bihar is Patna."

"Patna, the capital of Bihar, sits on the Ganga."

answers "Patna" — correctly

Now ask about a village it has never seen written down.

It will still answer confidently — because the SHAPE of the answer is all it knows

Pattern, not understanding

It has read enormous amounts of text and learned **which words follow which**.

- 1 That is genuinely useful — most work is patterned language.
- 2 It is also why it can be confidently, fluently wrong.
- 3 It has no way to know the difference between true and plausible.

REMEMBER

Use it for the first draft. You stay responsible for the facts.
