

Deep does not mean clever. It means **layers**, each one seeing a bigger picture.

EACH LAYER SEES A BIGGER PICTURE

Nobody programmed these stages — depth forced them

- 1 Layer 1 sees **edges**. Just light and dark boundaries.
- 2 Layer 2 combines edges into **shapes** — a curve, a corner.
- 3 Layer 3 combines shapes into **things** — an eye, a wheel, a letter.

REMEMBER THIS

Nobody programmed those stages. The network found them because depth forces it to.
