

Nothing in the code changed. The **world** changed. That is data drift.

NOTHING IN THE CODE CHANGED

No error. No crash. No alert.

- 1 A model trained on 2023 shopping habits meets 2026 shoppers.
- 2 Accuracy falls quietly — no error, no crash, no alert.
- 3 You only find out when someone complains about the results.

REMEMBER THIS

Monitor the inputs, not just uptime. Drift is silent by nature.
