

Python is table stakes. Nobody hires for it.

WHAT COMPANIES ACTUALLY HIRE FOR

LAYER 3 · EVIDENCE

something running that others used

LAYER 2 · JUDGEMENT

which model, and why

LAYER 1 · TOOLS

Python, an API call, a notebook

Most stop at layer 1 and apply anyway

- 1 **Tools** — Python, an API call, a notebook. Everyone applying has this.
- 2 **Judgement** — which model, and why. This is where the interview happens.
- 3 **Evidence** — something running that another person actually used.

REMEMBER THIS

One deployed project you can defend beats ten tutorials you followed.
