

Attention, in one sentence

THE SAME WORD, PULLED TWO WAYS

The bank was steep

river

The bank was closed

money

Attention weights which neighbours matter

The same word, pulled two ways by its neighbours

Attention lets every word **look at every other word** before deciding what it means.

- 1 'The **bank** was steep' and 'The **bank** was closed' — same word, different meaning.
- 2 The model reads the whole sentence and **weights** which other words matter.
- 3 'Steep' pulls *bank* toward the river. 'Closed' pulls it toward money.

REMEMBER

That weighting is attention. It is why context finally worked.
