

RAG is an open-book exam

OPEN-BOOK EXAM

The model answers from the pages, not from memory

Retrieve first, then answer from what was retrieved

A model without RAG sits the exam from memory. With RAG, it gets **the book**.

- 1 Your question first **searches your documents** for the relevant pages.
- 2 Those pages are pasted into the prompt alongside your question.
- 3 The model answers from what is in front of it, not from memory.

REMEMBER

That is why RAG cuts hallucination — you changed the exam, not the student.
