

Show, don't describe

Instructions guess; examples pin it down

One **example** beats three paragraphs of instructions. Every time.

- 1 'Write formally' is vague — the model guesses what you mean.
- 2 Give one input and one ideal output, and it matches the pattern.
- 3 Two or three examples pin down tone, length and format together.

REMEMBER

When a prompt is not working, add an example before adding more words.
