

Pick the tool by the failure you can afford

Cheap mistakes and expensive mistakes need different tools

The question is not which tool is best. It is **what happens when it is wrong**.

- 1 Drafting an email? A wrong answer costs you ten seconds.
- 2 Summarising a contract? A wrong answer costs you a clause.
- 3 The second case needs citation and review. The first does not.

REMEMBER

Match the checking effort to the cost of the mistake, not to the hype.
